

SPEEDSIZE INTEGRATIONS

LINK | SCRIPT | VIDSITE | MAGENTO | SHOPIFY | WORDPRESS

No more complex APIs and coding processes. SpeedSize™ offers effortless and customizable integration options, including media Link redirect, 1 line of Script in the header, or dedicated Plugins for the most popular CMSs: Shopify, WordPress and Magento-Amasty. SpeedSize™'s neuroscience AI-optimization will automatically decide the correct format, crop and resize your media. Then it will deliver the best media file for every user, reducing the size by up to ~99% with no visible quality loss.

MEDIA AI-OPTIMIZATION PROCESS

“WP / WOOCOMMERCE” INTEGRATION

Your Woocommerce/WordPress plugin is protected with best-in-class security by a system of failsafes. Better yet, it will drive sales by allowing you to use better quality imagery on a site that loads in milliseconds. The SpeedSize™ Shopify plugin can be implemented in seconds after getting your client's ID.

SpeedSize Settings

~90-99% smaller media, 100% of the visual quality. *Get Sharper & Faster*

Enable Neuroscience Media Optimization

Yes

SpeedSize Client ID

Active

Enable on WP admin

No

When enabled, images inside WP admin will be loaded from SpeedSize as well.
[!] Note: it may also cause SpeedSize URLs to be used when generating files or saving URLs to the database (e.g., theme settings, generated css files, etc). It might improve SpeedSize's CDN coverage, but it won't be automatically cleaned when the plugin is disabled.

Enable Real-Time HTML Parsing (advanced)

Yes

This option is enabled by default in order to increase our support for a variety of themes and plugins, yet, you may disable it if everything seems to works the same without it on your website.

Use SpeedSize size params on HTML Parser (advanced)

Yes

When enabled, our HTML parser will try to extract the image size from the image URL (this may be disabled only when using SpeedSize alongside other plugins/scripts that are changing the normal image file names on WP).
